

SOIL STORE

Our idea :

Our project revolves around a plant store that provides customers with a wide selection of plants, including indoor, outdoor, flowering, and aromatic varieties. In addition to this we also offer the convenience of home delivery for all our products.

Home page

The home page of this website features a welcoming scene that greets the customer upon arrival. The page includes an anchor link that leads the customer to the plant department section of the same page. The plant department section displays images of various plants, and when the customer hovers over an image, JavaScript is used to display the content description of the department.

The header of the home page features a navigation bar that includes links to all the pages of the website. The footer of the home page is always visible and contains copyright

The main content of the webpage is presented in a table format, showcasing various outdoor plant products. Each product is represented by a product box, containing an image container displaying multiple images of the plant from different angles. Below the images, there is a product category, indicating the specific type of plant, the price of the product and the size of the plant.

Show Your Products page

The header features a large, horizontal photograph of several different types of potted plants, including a large Ficus and some smaller leafy plants.

Show your Product
We are pleased to display your products and services related to plants and gardens through the botanical store by sending your data through the following form, including the products that you want to display in the store or the services that you provide, and we will contact you to start displaying your products and services

Aromatic Plants Product Page

Functionality:

I have created a webpage dedicated to aromatic plants. The main structure of the page consists of a container div, which is further divided into individual boxes to display nine different plant images. The images are arranged in a grid format, and I have managed the column width for a balanced layout.

To enhance user experience, I have implemented a hover effect on the images. When hovering over an image, a description appears along with an "Add to Cart" button. This allows users to learn more about each plant and easily add them to their shopping cart.

To facilitate navigation, I have added a navigation bar that enables users to seamlessly move across different product pages. The navigation bar features an animated line effect on hover, making it visually engaging.

Additionally, I have included a form that drops down when an icon is clicked. This form is designed to gather user opinions. By utilizing JavaScript, I have implemented functionality to print the submitted data below the form. Furthermore, the form can be easily toggled up and down, and it automatically closes when the page is loaded.

About Us

Watering

- Be mindful not to overwater or underwater them.
- Check the soil moisture level before watering and adjust accordingly.

Sunlight

- Place indoor plants near windows with indirect sunlight or provide them with grow lights.
- Outdoor plants should be placed in areas that receive the appropriate amount of sunlight for their species.

Soil and Fertilize

- Use well-draining soil suitable for the specific type of plant.
- Regularly fertilize plants with appropriate fertilizers to provide essential nutrients for their growth. Follow the recommended fertilizing schedule and dosage for each plant.

Temperature and Humidity

- Different plants have varying temperature and humidity preferences. Follow the instructions on the label.

Pests and Diseases

- Monitor plants for any signs of pests or diseases. If detected, take appropriate measures to control and treat the infestation promptly.

Repotting

- Periodically repot plants to provide fresh soil, additional space for root growth, and ensure proper drainage. Choose a pot with drainage holes and use the right potting mix for each plant.

Functionality:

I have designed a webpage focused on plant care. The centerpiece of the page is a **table** that I have created using HTML. To enhance its appearance, I utilized **CSS** to remove the table borders, resulting in a cleaner and more visually appealing design. Additionally, I applied shadow effects to the table, giving it a subtle 3D effect that adds depth and visual interest.

To simplify the styling process and provide more flexibility, I employed div elements within the table structure. This allows for easier customization and styling options, making it more convenient to modify the layout and appearance of the content.

Moreover, I have incorporated a header and footer section into the page. The header section typically includes elements such as a logo, menu, or important information related to the page's content. The footer section, on the other hand, is typically used for copyright details, additional navigation links, or contact information. This helps maintain a consistent layout and navigation experience throughout the webpage.

Indoor Plant Page

The page features a header with the title "Soil Store" and navigation links for Home, Plants, Vases, Gifts, Show Your Products, and About Us. Below the header, there are category filters: outdoor, Indoor (which is selected), and Aromatic. The main content area is titled "Indoor Plants" and includes a welcome message: "Welcome to our selection of beautiful home plants. Browse through our options below and click on the name of the plant to search Google for more information." A table lists five plant options:

Plant Name	Price	Description	Image
Monstera Deliciosa	\$30	Large tropical leaves with unique cutouts.	
Snake Plant	\$25	Tall, slender leaves with a striking pattern.	
Fiddle-Leaf Fig	\$40	Tall and dramatic with violin-shaped leaves.	
Peace Lily	\$20	Small white flowers and glossy green leaves.	
Spider Plant	\$15	Long, narrow leaves with spider-like growth habits.	

At the bottom of the page, there is a footer with the text "©2023 soil store. All rights reserved." and a link to "https://www.google.com/search?q=Peace+Lily".

I made this indoor section page that showcases a table of different indoor plant options with their prices, descriptions, and images. This webpage includes a header with the title "Indoor Plants," a paragraph welcoming visitors and encouraging them to browse through the available plant options, and a container element that houses the table of indoor plant options. The table includes a header row with the column names "Plant Name," "Price," "Description," and "Image," and five rows of data (shop items), each representing a different plant option. Each row includes a clickable plant name that links to a Google search for more information about the plant. The table also includes images of each plant option.

Vases Page

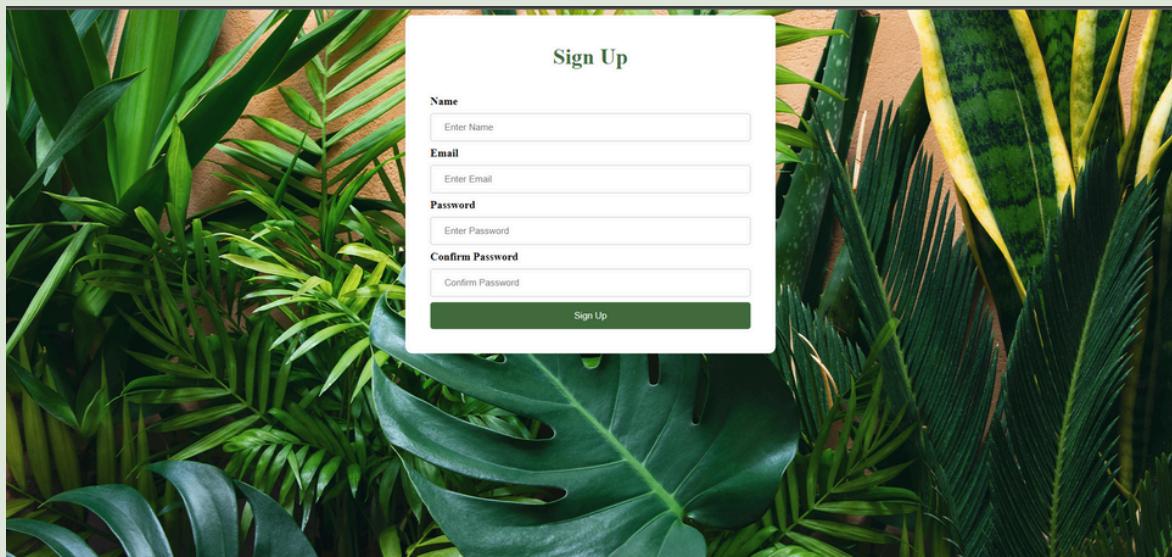

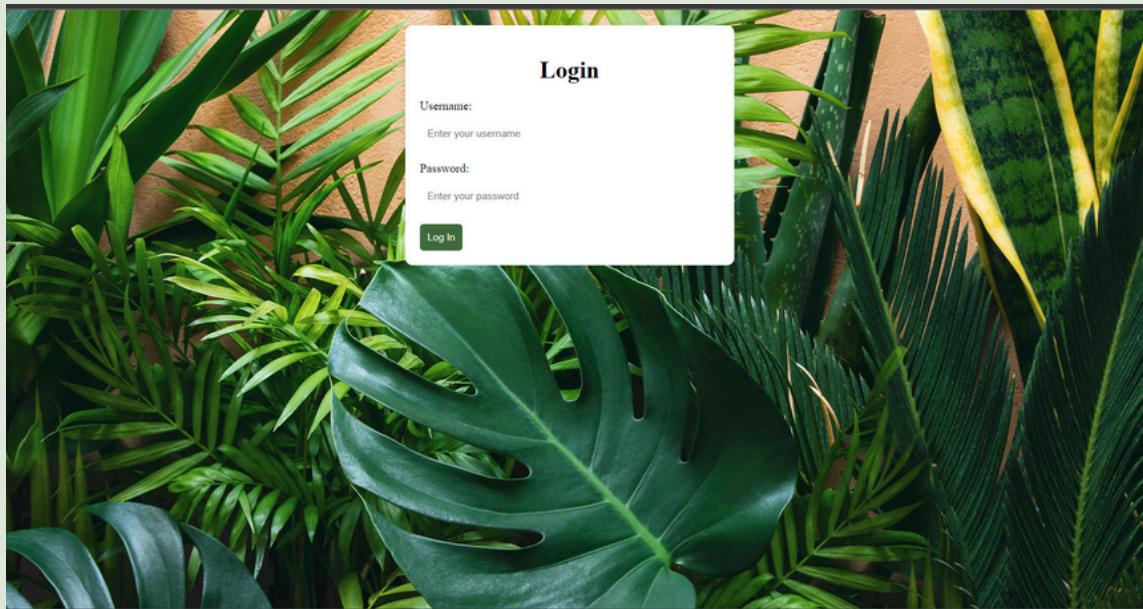

The screenshot shows a webpage from a site called "Soil Store". The header includes links for Home, Plants, Vases (which is the active tab), Gifts, Show Your Products, and About Us. Below the header, there are three categories: outdoor, Indoor, and Aromatic. The main content area is titled "Vases for Home Plants" and contains a paragraph encouraging visitors to browse options and click for more details. Below this is a table listing five vase options:

Vase Name	Price	Description	Image
White Ceramic Vase	\$20	Simple and elegant, perfect for any plant.	
Glass Terrarium	\$30	A unique and modern way to display your plants.	
Rustic Metal Vase	\$25	Add some character to your plants with this vintage-style vase.	
Colorful Ceramic Planter	\$15	Add a pop of color to your plants with these vibrant planters.	
Wooden Planter Box	\$35	A natural and rustic way to display your plants.	

At the bottom of the page, there is a footer with the text "©2023 soil store. All rights reserved." and a link "file:///C:/Users/almso/OneDrive/الملفات المكتبة/vases1.html".

this vases section page that showcases a table of different vase options with their prices, descriptions, and images. The webpage includes a header with the title "Vases for Home Plants," a paragraph welcoming visitors and encouraging them to browse through the available vase options, and a container element that houses the table of vase options. The table includes a header row with the column names "Vase Name," "Price," "Description," and "Image," and five rows of data, each representing a different vase option. Each row includes a clickable vase name that links to a details page where visitors can see more information about the vase and place an order. The table also includes images of each vase option.

login\signup Page

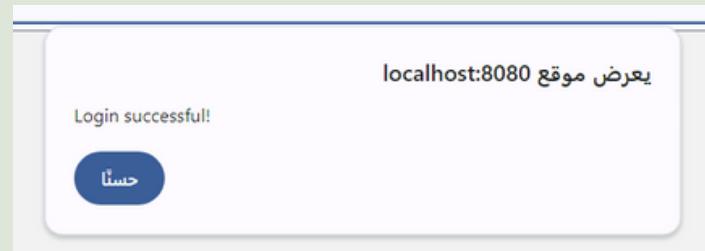

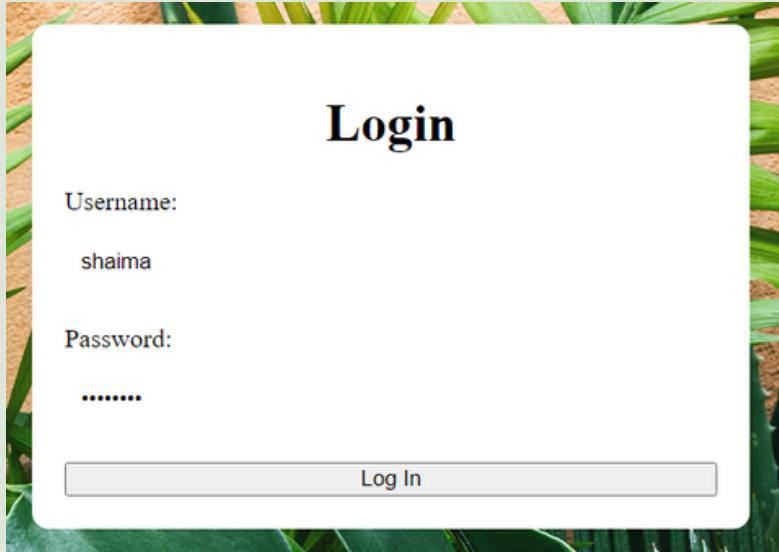

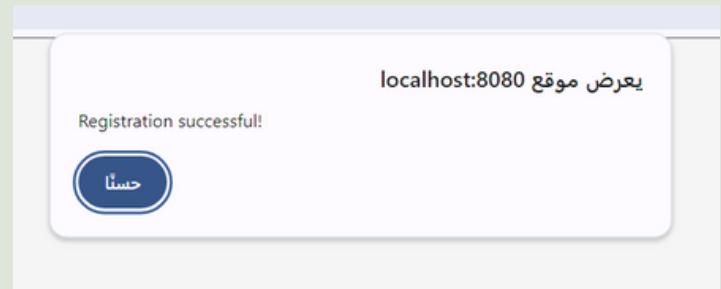

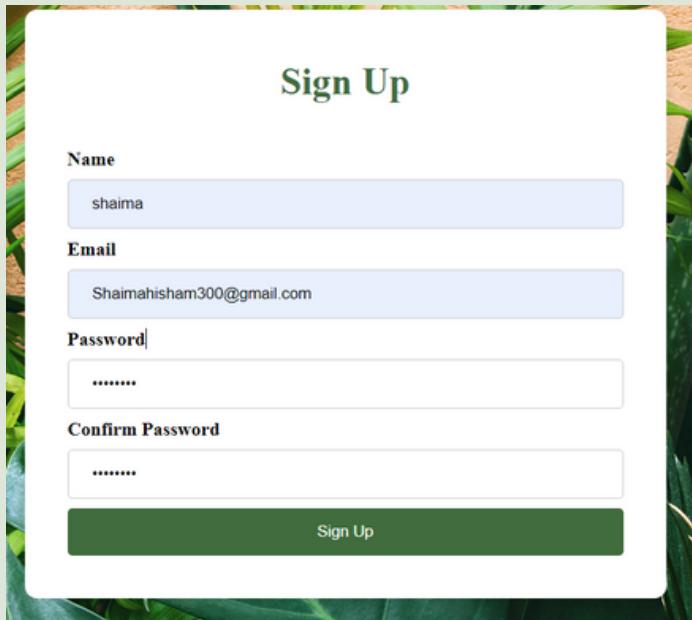

Gifts page/ Cart

The screenshot shows a website interface. At the top left is a logo for "Soil Store". The top navigation bar includes links for "Home", "Plants", "Vases", "Gifts", and "Show Your Products". On the right side, there is a "Your Cart" section. This cart section displays a single item: "A FLOWER PACKAGE" at "150 RS" with a quantity of "1". There is a "Buy Now" button and a trash icon. Below the cart, there are six flower bouquets arranged in two rows of three. Each bouquet has a price tag below it: "A FLOWER PACKAGE 125 RS", "A FLOWER PACKAGE 250 RS", and "A FLOWER PACKAGE 150 RS". Each price tag also has a trash icon.

In the gift page i have created a table to contain all the products and their images, titles, prices, and a cart button

in the cart you can open the cart using the cart icon in the header and change the quantity and remove the element from the cart by trash button and you can close the cart using the - x- button

A screenshot of a MySQL database interface. The left sidebar shows databases "DB_1 8.2.0" and "soil_store 2.05k", and a table "users" with 1 row. The main area shows a query window with the SQL command "SELECT * FROM users LIMIT 100". The results table shows one row:

	id	name	email	password
	1	shaima	Shaimahisham300@gmail.com	123456

A photo of the database after registration

Cookies and session

Name	Value	Domain	P...	Expires / M...	S...	H...	S...	S...	P...	P...
username	Ruba	localh...	/	2024-03-20...	12					M...

id	9	localh...	/	2024-03-20...	3					M...
user_id	1	localh...	/	2024-03-19...	8					M...

```
// Start a session and set session variables
$_SESSION['id'] = $conn->lastInsertId();
$_SESSION['username'] = $name;

// Set a cookie to remember user's login state
setcookie('id', $_SESSION['id'], time() + (86400 * 30), "/");
setcookie('username', $name, time() + (86400 * 30), "/"); // Cookie expires in 30 days
```

After the registration user we will create cookies and session to save id and user name.

My Profile page

The screenshot shows a web form with a title 'My Account'. It contains two input fields: 'Name' with the value 'Ruba' and 'Email' with the value 'ruba@gmail.com'. Below the inputs is a green button labeled 'Delete Account'.

this page allows user to delete his account by entering name and email.

```
if ($_SERVER["REQUEST_METHOD"] == "POST") {  
    // Check if 'name' and 'email' keys are set in $_POST array  
    if (!empty($_POST['name']) && !empty($_POST['email'])) {  
        $name = testInput($_POST['name']);  
        $email = testInput($_POST['email']);  
  
        // Prepare SQL statement to check for the existence of the user  
        $sql = "SELECT id FROM users WHERE name = :name AND email = :email";  
  
        // Prepare the SQL statement  
        $stmt = $pdo->prepare($sql);  
  
        // Bind parameters  
        $stmt->bindParam(':name', $name, PDO::PARAM_STR);  
        $stmt->bindParam(':email', $email, PDO::PARAM_STR);
```

```
if ($user) {  
    // User exists, delete the row from the database  
    $userId = $user['id'];  
  
    // Prepare SQL statement to delete the row  
    $deleteSql = "DELETE FROM users WHERE id = :id";  
  
    // Prepare the SQL statement  
    $deleteStmt = $pdo->prepare($deleteSql);  
  
    // Bind parameters  
    $deleteStmt->bindParam(':id', $userId, PDO::PARAM_INT);
```

we check the validation of input and then retrieve info from DB. Finally, we delete the user's row (id, name, email, and password).
